

Enhance Your SAP Business One Environment with APP to Gain New Insight into Your Business, Streamline Your Processes and Improve Communications

How much more productive would you be if you could easily customize the fields and screens in SAP Business One to meet your specific needs? What if you could quickly create and view interactive charts and dashboards to gain a better understanding of business performance? Would you be able to streamline processes if you could import journal entries into SAP or automate your bulk/batch delivery of documents and reports? APP provides you with the one solution that can do it all!

Get More Done in Less Time with APP

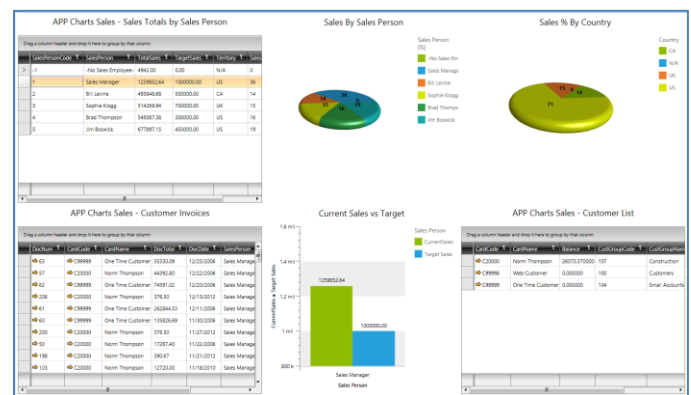

APP is a fully integrated and certified add-on for SAP Business One that enables you to customize screens, create robust reports with simple queries, email documents and reports based on user actions, automate the batch/bulk delivery of documents, import journal entries into SAP, and perform access control monitoring for SOX compliance. It integrates four modules (Customizer, Document & Report Delivery, Charts & Dashboards, and Scheduler) to help you get the most out of SAP.

Key features include the ability to:

- Customize SAP screens by adding new controls, moving fields, and integrating validations
- Create robust dashboard reports and charts to quickly gain insight into business performance
- Easily automate tasks and populate fields in SAP Business One to boost productivity
- Schedule the automatic delivery of documents such as invoices or commission reports to the right contacts and maintain activity records
- Write and design emails using Microsoft Word then blast them out to create more effective communications
- Upload journal entries into SAP to ensure your accounting data is available in one system
- Generate security audit reports to track users for SOX compliance

Turn Queries into Dynamic Charts & Dashboards for Real-time Analysis

Gain the business insight you need to better understand your company's performance and make strategic decisions with APP's Charts & Dashboards. This easy-to-use yet powerful tool enables you to build charts, dashboards and pivot grids to provide graphical views of your data so you can quickly find key information.

A prepackaged library of commonly used queries helps you get up and running quickly. These include:

- Sales – break down sales by product, territory, sales rep and more
- Inventory – determine the correct inventory levels and gain a visual view of what's available
- Performance – analyze KPIs to achieve new visibility into company performance

Customize SAP Business One to Streamline Your Work and Boost Productivity

By utilizing APP's Customizer, you can enhance SAP Business One screens to make daily tasks easier to complete. It gives you the flexibility to move fields around so you can display the information where you want, create mandatory fields to ensure data integrity, and set up validations behind forms and controls to add in-depth functionality.

Key features of APP Customizer include the ability to:

- Make visual changes to the SAP screens in order to display the relevant fields (including user defined fields) and information for a user
- Place report menus anywhere on the SAP menu structure for greater accessibility
- Set the order of tabs to reflect your workflow
- Define custom rules so the correct data is entered into a field

Instantly Deliver Reports and Documents from SAP Screens

APP Document & Delivery provides you with the most comprehensive document delivery capability available for SAP Business One. It enables you to create a workflow that when a user takes specific actions individual or batch documents and reports are automatically sent via Microsoft Outlook, SMTP, Efax, print or mail to the right contacts. This streamlines your processes and speeds the delivery of documents by automating the steps involved. You can also personalize the emails as part of the document delivery by using the email interface. Once an email is delivered, SAP Business One is updated with the sent status to keep track of all communications.

Key examples of using APP Document & Delivery include:

- Sending a sales order acknowledgment to a customer and a separate document to sales
- Emailing a shipment notification to a customer with the UPS shipment tracking link
- Notifying customers of overdue invoices based on specific parameters that you define

Schedule the Automatic Bulk/Batch Delivery of Documents

APP Scheduler is an additional module that allows you to perform data generation and delivery quickly and effortlessly by automating your report generation process, customizing the delivery method, and taking advantage of various scheduling options. This ensures your processes run faster and smoother, delivering documents to the right contacts in a consistent way. In addition, you can integrate your scheduling with custom workflows using APP's Customizer to provide you with even more flexibility in determining what documents to select, when they are sent, and who receives them.

Import Journal Entries to Keep Accounting Data in One Place

Whether you're pulling data from other accounting systems in different divisions or adding payroll data, APP gives you the ability to import journal entries so all of your information is accessible in SAP. This enables you to then query the data, generate reports, and deliver documents using the APP features.

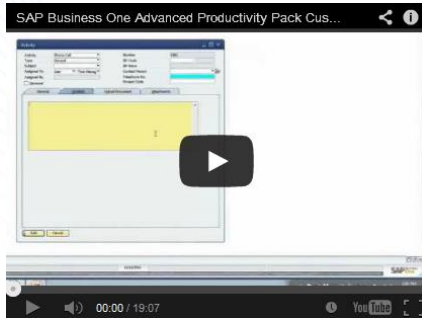

Gain Visibility into Who Is Accessing Your Data

By utilizing APP, you can generate security audit reports detailing the type of information that each user can access. This not only provides you with tools to perform access management but also helps you achieve SOX compliance by gaining visibility into what data your users are viewing.

Advanced Productivity Pack (APP)

Additional Key Features

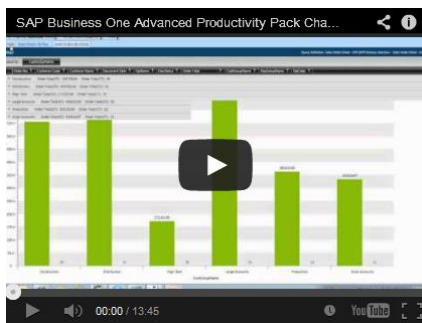

Customizer Module:

Click to view a demo of APP's Customizer
